## Kristall

With its unique brilliance and depth, Kristall by Niemann sets a new quality bench mark for high gloss surfaces. Light reflecting on the Kristall surface underlines its own distinctive personality. Whether supplied as a cut and edged panel or with Kristall laid onto the surface emulating glass – this materials high shatter and scratch resistance makes it suitable for furniture, project work, shop fitting as well as for further individual processing to the highest of standards. The precisely calculated construction of this panel ensures its stability.

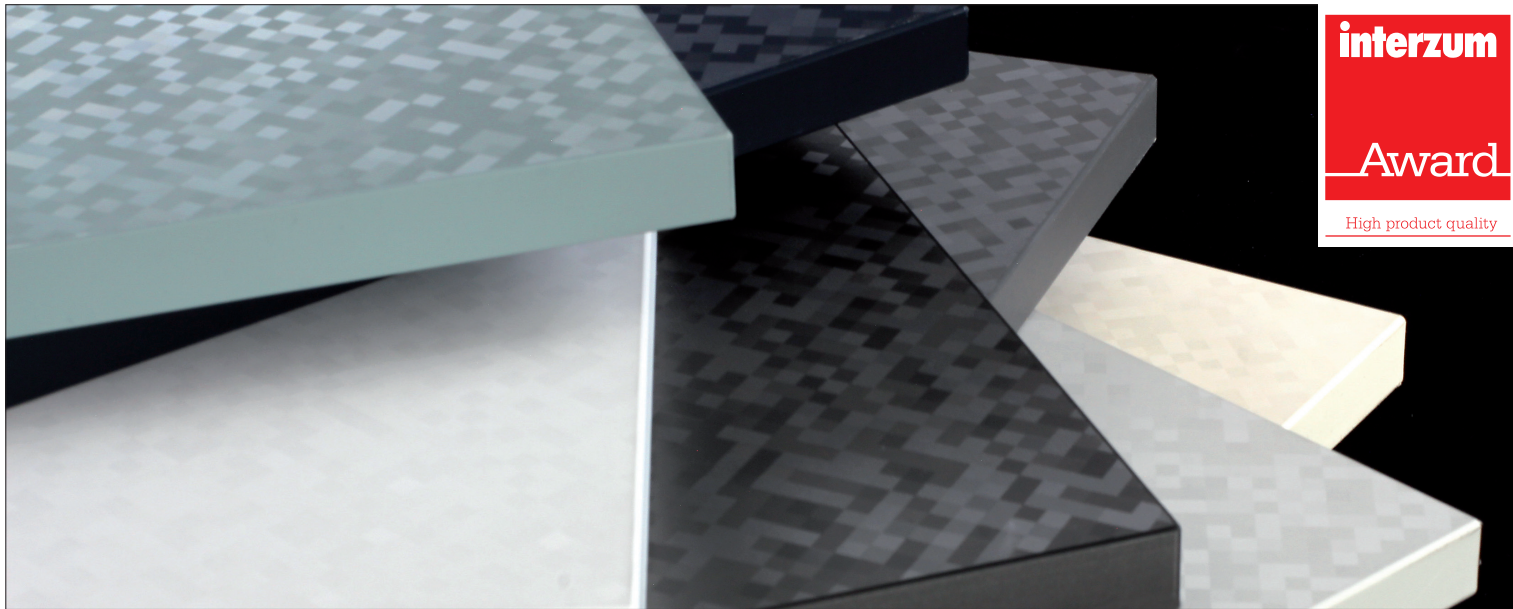

## Kristall Satina

In its unique appearance of frosted glass, Kristall Satina extends the successful collection of Kristall. At the same time, Kristall Satina impresses with its surprisingly authentic look and touch of frosted glass and its highlighted and solid looking glass construction. The available number of either contrasted or color-matched edges is putting Kristall Satina into the harmonious relation between its smooth and plain looking surface and the color scheme of the rest of the living environment.

With the same excellent product features of the successful Kristall Gloss, it is not only suitable for discerning furniture manufacturing but also for flexible use in the contract and condo sector. Particularly its high breaking strength, its extremely resistant and insensitive surface and its distortion-free construction, this lightweight also offers numerous advantages in production and in application.

## Pianovo Diamond

## Pianovo Metall

Another milestone in the Pianovo range is the new Pianovo metal finishes - a result of creative and consistent development of a new product: A combination of the familiar Pianovo lacquer finishes and real metal. The spectrum of finishes, with its different colour shades in warm and cold tones, reflects the latest trends and designs in creative furniture making and shopfitting. This gives amazing scope for new and flexible combination options. What's more, the patented finishing process provides high resistance and is remarkably impervious for a matt finish.

## Pianovo SoftTouch

Resistance to stain, e.c.

Red wine

Fingerprint

Oil

Acetone

## Formholztechnik

3D furniture components in various types are manufactured. Generally we use high quality MDF as a substrate. This can then be laminated with Thermal Laminates, Bonded Leather, Acrylux, Pianovo or Veneer. By embossing the surface with various structures a wide range of product mixes can be manufactured. Almost all variants can also be offered as curved components. In addition to a wide standard range, we can also offer special types and shapes.
