

MDT ■■ Flexible Products □

Specialists in lightweight constructions

MDT offers strong, new concepts based on creative innovation.

Flexible light weight aluminium profiles can be manipulated by hand in all directions making it possible to manufacture exceptionally curved light weight, strong structures. This allows for high degrees of freedom in designing for construction companies, designers and architects alike. These extremely well documented products are used to solve a large number of tasks, for example with:

Scenography (stages and set pieces for film, TV and theatre)

Architektur (skylight constructions, mock-ups, models, templates)

Interior design (shops, offices, shopping malls and display stands)

Industry (machine covering, stiffening, fixtures, curvelines, templates etc.)
